4. Have you ever used alcohol or drugs first thing in the morning to steady your nerves or to get rid of a hangover (Eye Opener)?	<input type="radio"/>	<input type="radio"/>

Medicated-Assisted Treatment (MAT) is the use of FDA- approved medications, in combination with counseling and behavioral therapies, to provide a “whole-patient” approach to the treatment of substance use disorders.

MAT is primarily used for the treatment of addiction to opioids such as heroin and prescription pain relievers that contain opiates. The prescribed medication operates to normalize brain chemistry, block the euphoric effects of alcohol and opioids, relieve physiological cravings, and normalize body functions without the negative effects of the abused drug.

• MAT for Opioid Use Disorder	Suboxone (buprenorphine and naloxone) film is used to treat opioid dependence and addiction to short-acting opioids such as heroin, morphine, and codeine, as well as semi-synthetic opioids like oxycodone and hydrocodone.	
• MAT for Alcohol Use Disorder	Vivitrol, naltrexone, acamprosate, and disulfiram are the most common drugs used to treat alcohol use disorder.	
Would you like to have more information about this treatment approach?	YES <input type="radio"/>	NO <input type="radio"/>
